

Autobooks Accounting And Reporting

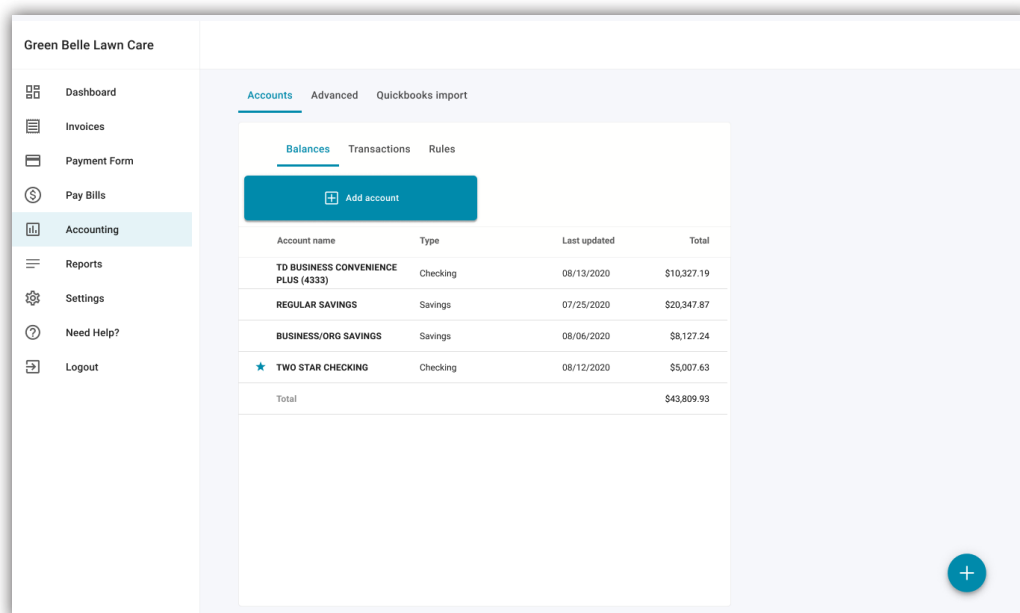

Business owners who send invoices and get paid through Autobooks can upgrade to add automated accounting and reporting features.

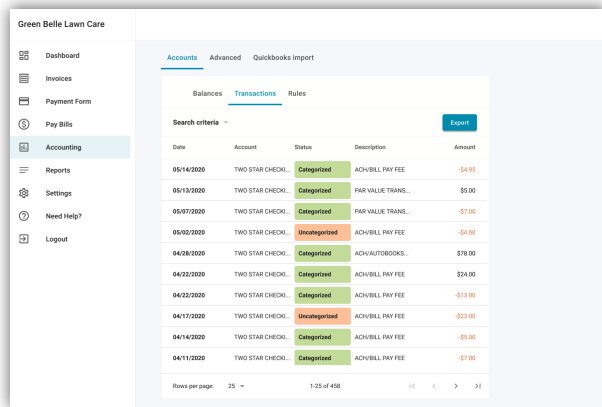

Every transaction within a business owner’s checking account is automatically synced with the Autobooks platform. This allows the business to categorize their transactions and have a clear view of them all in one place.

In addition, a small business can link accounts and credit cards from other financial institutions to their Autobooks account. This means every transaction for their business will be accounted for, making Autobooks the home base for their business.

Alongside of the accounting feature, business owners can quickly create and export reports of their business activity. All reports are exportable into a friendly .CSV format.

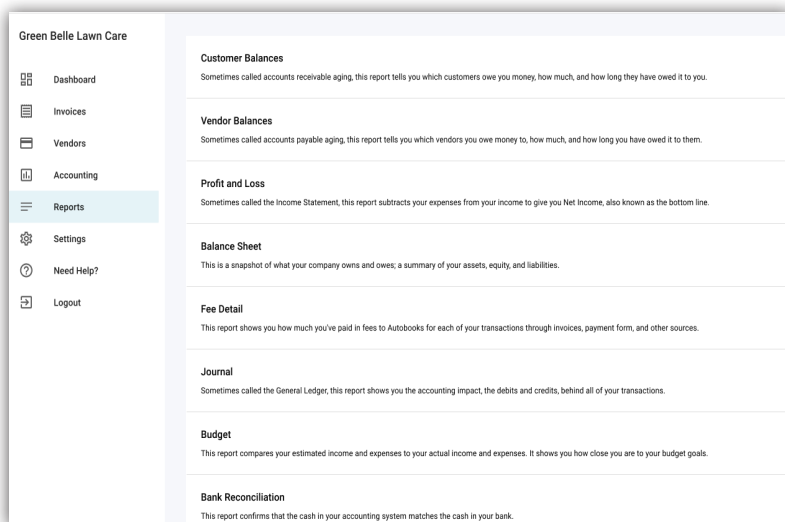

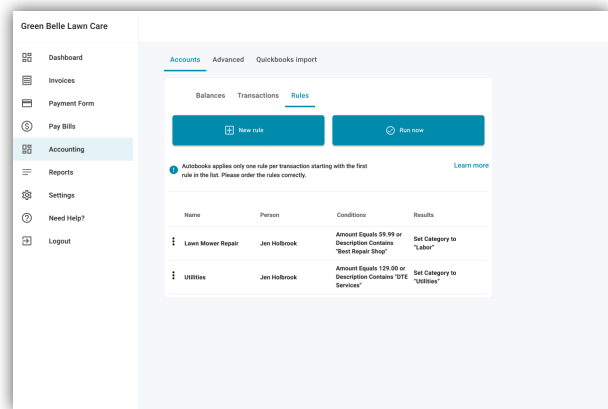

With Autobooks, business owners can stay up to date with the click of a button.

Inside the accounting tab, businesses can **manage** all of their transactions in real time with their checking accounts.

The ability to **categorize** transactions or even write automated rules is easy to do with just a few clicks.

Small Business customers have access to **exportable reports** that can be used to share the business information needed for their accountant or banker!

These reports **include** Balance sheets, Profit and Loss statements and even budget reports.
